

MINDBURNER MIDI THRU SPLITTER CONNECTION EXAMPLE

Connect the controller keyboards (or computer MIDI interface etc) MIDI OUT to the splitters MIDI IN

Connect the 2.1 lead to a USB or use a 5-6v DC adapter, positive tip. USB charger ideal

Play the keyboard, the splitters red LED should light showing MIDI signals.

Now connect one of the splitters MIDI THRU's to your sound module (synth, drum machine etc) MIDI IN

Play the controller keyboard again; the sound module should now play over MIDI

If it's not working..

Ensure you have decent MIDI leads, some 5 pin are not wired correctly

Ensure the controller and sound module are on the same MIDI channel

Try a different USB source or a DC wallwart adapter set to 5 or 6 volts, center Pin positive.

Avoid USB hubs as they may not supply enough power
